

Springcare Nursing and Care Homes are open for short or long term new admissions

10 steps to fully inform you

Robust deep cleaning and infection control processes

Good supply of appropriate PPE

Whole home testing programme

External Quality Health Checks with CQC and Health Protection Team

Units/floors kept separate and residents mix in small, socially distanced groups

Pre-bookable, socially distanced visiting options and iPad calls with loved ones

Activity coordinator to help with activities

Front-line staff receive full training and continuous communications

Financial robustness during challenging economic times

We understand that coming into a care home for a short break or permanent placement can be an anxious time for people. However our experienced care teams and Admissions Manager are here to help you with the transition process to put your mind at rest.

We have been required to adapt the way we operate our homes safely in light of covid 19, however we still offer a warm welcome to people and try and make things as comfortable as possible.

New residents will need to isolate for 14 days on admission to our homes. If a negative test prior to admission has been obtained, people can isolate in their chosen room. If a resident needs to be admitted to the home before the test result is received, they will need to go into our isolation bubble which is a dedicated area of the home so people can be supported by a team of staff just for them. Once the isolation period is over, residents can then go to their chosen room.

New residents

We are still undertaking pre-admission assessments to make sure we can meet your needs but we will do this over the telephone as we are unable to visit you in your current placement.

To enquire, request an assessment or to book a place in our homes,

call 01948 661 400 or contact the home direct

We are accepting respite applications for a minimum four week period. Usual terms and conditions apply.
